

## Submission of a revised manuscript for review

Manuscripts submitted for review must be in the IEEE double column format with single space 10p fonts and figures included. At this stage, please do not spend too much time following the IEEE format ([see PDF requirements](#)), but the PDF file should be readable. We would like to see if figures are readable, how many printed pages are required and the general layout of the paper. It is also easier to review the manuscript if text and figures are together.

In order to secure a fair review process authors' names and affiliations should be removed from the manuscript (they will be entered only to MC electronic database). Please do not include authors' names, footnotes, acknowledgement, bios or photos. The only file which has to be submitted is the manuscript with response to reviewers' comments in PDF format (WORD files are also possible but please be sure that the file was properly converted by the submission system). Also, please do not submit a copyright form at this time or anything which could identify authors' names and affiliation.

When submitting the manuscript, follow this procedure:

1. Before submitting manuscript, read the **Check List** below and modify the manuscript accordingly.
2. Prepare manuscript in IEEE double column 10p format without authors' identification.
3. Prepare response to reviewers, merge it into one file with your revised manuscript and save it as one PDF file.
4. Open web page <http://mc.manuscriptcentral.com/tii>.
5. In the column "My Manuscripts" click on "Manuscript With Decision" and find the manuscript you want to revise.
6. Click on "create a revision" and follow submission steps.
7. At this time, please do not upload any other files except the revised manuscript and responses to reviewers in one PDF file.
8. Detailed step by step instructions can be found at <http://tie.ieee-ies.org/tie/MCinf.html>.
9. Frequently asked questions can be found at <http://tie.ieee-ies.org/tie/faq/index.html>.

### Check List for a manuscript sent for review:

1. Is your manuscript written in IEEE double column format with 10p font? At this stage, it is not that essential that you follow every detail of IEEE publishing format (for accurate formats you may visit <http://www.eng.auburn.edu/tie/minimun-xplorepdf.pdf>) but please try to follow the format as closely as possible, so both you and the reviewers may evaluate the actual length of your paper.
2. In order to secure an unbiased review process we are asking authors NOT to include their names or affiliations inside the manuscript. Please remove from your manuscript any information which could identify authors (such as an acknowledgement). Please DO NOT upload authors' bios or signed copyright form. This information will be needed once the manuscript is accepted.
3. Please include your unsigned response to previous review next to the revised manuscript in **the same** pdf file. In the revised manuscript use different font color for all introduced changes (font color change is preferred over highlighted text)

4. Please be sure that the manuscript is up to date. It is expected that 10 to 20% of references are to **recent** journal papers.
5. Please check if your manuscript is within the general interest of the Society. For easier than IEEE XPLORE access to the Society conference and journal publications you may visit <http://tii.ieee-ies.org/IESpub.htm>
6. Does the manuscript clearly describe your accomplishments? Can your manuscript be shortened? Are there sentences or paragraphs that do not provide essential information and can be eliminated?
7. Is the length of your manuscript adequate? Please notice that for long papers, you may face mandatory overlength charges of \$160 per page. These are the limits:
  - 4-8 printed pages for regular pages (including authors bio and photos).
  - 1-3 printed pages for correspondence (authors bio and photos should not be included).If you want to avoid these mandatory charges for regular papers please tailor your paper so the last page (with photo and bios) will not exceed 8 page limits. Notice that font compressing or reduction of line space will not help you because all manuscripts are re-edited from scratch at the IEEE HQ. Remember, that once your manuscripts is accepted, you **will not** be allowed to introduce any significant changes in it. Therefore, you must make changes **BEFORE** the review process is completed. Notice that after manuscript is accepted you are allowed to make only **minor changes** to the manuscript (see [here](#) for details).
8. Is your title adequate and is your abstract correctly written? In the age of electronic publications it is not easy to be noticed (Industrial Electronics Society alone receives over 5,000 conference and journal papers per year). Authors have to do everything possible to get their paper noticed and read. Therefore, very careful wording should be used in the title and in the abstract. Without a proper title and abstract a great paper might never be downloaded from IEEE [Xplore](#) and read.
9. What is the likelihood of citations of your manuscript? Therefore, your paper should very clearly describe your accomplishments so other people can understand what your original contribution is.
10. Is the manuscript clearly written? Is the article exciting? Does the content flow well from one section to another? Please try to keep your manuscript on the proper level. It should be easy to understand by well qualified professionals, but at the same time please avoid describing well known facts (use proper references instead). Often manuscripts receive negative reviews because reviewers are not able to understand the manuscript and this is the authors' (not the reviewers') fault. Notice that if reviewers have difficulties, then other readers will face the same problem and there is no reason to publish the manuscript.
11. Do you have enough references? We will usually expect a minimum of 15 to 25 references primarily to journal papers, depending on the length of the paper. Citations of textbooks should be used very rarely and citations to web pages should be avoided. All cited papers must be relevant to your work and they should be referenced within the text of the manuscript.
